Deviyansh Rajpurohit

Software Engineer | AI/ML & Backend Development
deviyansh910@gmail.com | LinkedIn | GitHub

Education

Vellore Institute of Technology (VIT) **Sept 2023 – May 2027**
B.Tech. in Computer Science and Engineering

Experience

Web Development Intern – Capsitech IT Services Private Limited **May 2025 – Jun 2025**
Jodhpur, Rajasthan

- Completed a 45-day internship, developing responsive web interfaces using HTML, CSS, JavaScript, React and integrated frontend components with backend APIs.
- Debugged interface issues to improve responsiveness and cross-browser consistency while collaborating with the development team.

Projects

AI Contract Intelligence Platform GitHub
Python • FastAPI • Scikit-learn • Gemini • RAG • PostgreSQL • pgvector

- Built an AI-driven contract analysis system for 12 clause categories, streamlining document classification and risk identification.
- Evaluated the TF-IDF and Logistic Regression pipeline using grouped cross-validation, recording 88.35% mean accuracy and 86.27% macro F1-score.
- Integrated semantic retrieval and keyword search with pgvector to enable evidence-based clause discovery, document summaries and risk explanations.

Realtime Collaborative Spreadsheet GitHub
Java 21 • Javalin • MongoDB • React • TypeScript • WebSockets • Maven

- Designed a collaborative spreadsheet around 3 core entities — Workbooks, Sheets and Cells — for structured data management.
- Implemented WebSocket-based synchronization with version checks and idempotency controls to manage simultaneous cell modifications.
- Developed a formula-processing architecture using tokenization, abstract syntax trees and dependency graphs for calculation and circular-reference detection.

CodeSense AI – Intelligent Code Security & Review Platform GitHub
React • TypeScript • Node.js • Express.js • MongoDB • Redis • BullMQ • Gemini

- Created a GitHub-integrated code analysis platform backed by 6 core data models covering users, repositories, scans, findings, AI reviews and installation records.
- Configured asynchronous scan processing for 5 concurrent jobs, incorporating finding normalization, SHA-256 fingerprinting and commit-specific history.
- Implemented 3 heuristic analysis adapters for code-quality patterns, security weaknesses and exposed credentials, complemented by dependency checks and Gemini-assisted reviews.

Technical Skills

Languages	Java, Python, C++, JavaScript, TypeScript, SQL
AI / ML	Machine Learning, Generative AI, LLMs, RAG, NLP, Embeddings, TF-IDF, Scikit-learn, TensorFlow
Frameworks	Node.js, Express.js, FastAPI, React, Javalin, Sentence Transformers
Backend / Cloud	REST APIs, WebSockets, JWT, PostgreSQL, MongoDB, Redis, pgvector, AWS, Docker, BullMQ
Engineering	Git, GitHub, Linux, Maven, CI/CD, Testing, Debugging, OOP, DBMS, DSA, System Design

Honors & Achievements

- **Winner, Zoho Community Hackathon 2025 (IoT):** Independently conceptualized and developed SenseOps, an IoT automation solution, securing first place in the category.
- **150+ DSA Problems** solved across Leetcode and Codeforces.

Certifications

AWS Certified AI Practitioner • AWS Certified Cloud Practitioner
